

- 1) Using D3 was an interesting and fun experience. I, personally don't have 50 followers or more, so I had to use a friend's twitter account, Kevin Clemmons. He has 54 followers and that many people was easier to manage compared to the hundreds of followers that others had. Below is the list of data that my code extracted for me and underneath that is the beautiful graph that formed from the data.

2) This portion of the assignment was interesting and a little challenging to figure out, but I was able to decipher through the large amount of data and have a clear graph of who is a male and who is a female based on the user's first name and put in a chart given below. I was then able to use the same HTML code as step number one with slight changes and make a new graph showing only those with known gender and their connections.

JPlu9 & Jared Pluciniczak & male \\ \hline
StRaphael4 & St Raphael & male \\ \hline
joshhkidd & Joshua Reynolds & male \\ \hline
D_physique & Dynasty For Life Rec & female \\ \hline
